Shihong Duan has uploaded review for LaCoSwap: One-Step High-Fidelity Face Swapping via Latent Consistency Model

-- Review Summary --

1. How confident are you in your evaluation of this paper?

2. Confident
2. Importance/Relevance

3. Of sufficient interest
3. Classify the type of paper

More empirical
4. Originality/Novelty

2. Minor originality; provides barely sufficient new insight or understanding
5. Justification of Originality/Novelty Score (required)

The solution method also shows a certain level of innovation, but the description of the method details is unclear, especially regarding the relationships and importance among the modules.
6. Theoretical Development

3. Probably correct; provides limited new insights or understanding
7. Experimental Validation

3. Limited but convincing
8. Clarity of Presentation

3. Clear enough
9. Reference to Prior Work

3. References adequate
10. Overall evaluation of this paper

2. Marginal reject
11. Justification of Overall evaluation of this paper (required)

4. In the proposed method, details on mask generation, mask region selection criteria, and other strategies are unclear. The method also uses multiple conditional inputs, but lacks sensitivity analysis on these inputs.
5. How are the two parts of the framework in Figure 1 organically integrated?
12. Award Quality (only for papers marked "Definite accept")

0: Not award quality
13. Confidential Comments to technical program committee (will not be seen by authors):

The problem addressed in the paper is clearly defined, and the proposed solution shows a certain level of innovation. However, the theoretical analysis is insufficient, and the ablation experiments are not comprehensive enough. Additionally, the quantitative explanation for Figure 2 is lacking.
